Allowable Subject Matter

1. The following is an examiner's statement of reasons for allowance: Claims 23-28 are allowable over prior art references because related references do not disclose a method/apparatus for receiving a signal from a multiple-input-multiple-output (MIMO) communication channel having a plurality of input channels and a plurality of output channels, the method/apparatus generating initial taps that represent an impulse response estimate of the MIMO communication channel; generating prefilter taps based on the initial taps; generating output channel taps based on the generated initial taps and the generated prefilter taps; pre-filtering the received signal using the generated prefilter taps to generate an output signal, the output signal comprising a signal component and a noise component, which filtered noise affecting the output channels are mutually independent; and selecting the prefilter taps generated from the generated initial taps by calculating a maximized ratio of signal energy to noise energy (SNR) in some of the output channel taps in relation to a weighted sum of ratios of signal energy in other of the output channel taps and energy of the noise component of the prefiltered output signal.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
